BioHeal Pro

SKIN BUILT FOR FRICTION

Copper-peptide skin cream made for climbers and people who put their skin to work. It combines GHK-Cu with moisturizing and conditioning ingredients to help keep skin hydrated, soft and supple between sessions.

THE RESEARCH ROOTS

Dr. Loren Pickart renowned biochemist who published early GHK research in 1973. Pickart's earliest formulations engineered for wound healing, have become the trusted foundation for advanced skin care.

Our mission is to make thoughtful skin care part of life on and off the wall. We bring copper-peptide science and a climber's perspective together, making skin care approachable for people who ask more of their skin. **Copper science. Climbing life.**

HOW TO USE

1. Apply a small amount to clean, dry, intact skin.
2. Massage gently into dry or rough-feeling areas.
3. Use after climbing or between sessions.

The 3 linked building blocks

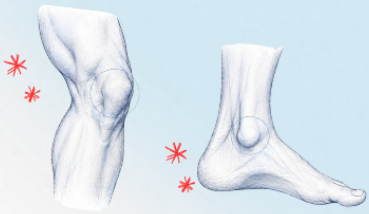

G — H — K

glycyl-l-histidyl-l-lysine

A short chain called a peptide. GHK is shorthand for its three amino acids; together, they can bind copper.

Helps to maintain skin hydration between sessions, following prolonged use of *liquid chalk or* other *skin drying* agents

Friction, pressure, and abrasion can affect more than your fingertips

KEEP SKIN CONDITIONED

Collagen & Elastin

Allantoin

Vitamin E

Squalane

SOFTEN & SMOOTHES

THE SCIENCE & THE BASE

GHK-Copper

29 Cu Copper

WHY BLUE?

The copper-peptide complex has a natural characteristic blue color. Shade alone does not measure strength; but any cream with >.3% will be blue.
